

Appl. No. 09/932,984

particularly light golf ball in the light weight golf balls. The light weight golf balls are typically classified into a one-piece golf ball consisting of integrally molded rubber material, and a two-piece golf ball consisting of a solid core of rubber material as a main component and a cover covering on the solid core, in the same manner as typical solid golf balls. The one-piece golf ball is frequently used at driving ranges, because it has excellent durability. The two-piece golf ball is frequently used as a golf ball for a round game, since it has excellent rebound characteristics. The light weight golf ball as a golf ball for a round game has been generally approved of or employed by non-muscular players, such as feminine players, junior players and the like, in order to accomplish good shot feel and low impact force.--

Please add the following title and corresponding paragraph before the paragraph beginning on page 7, line 5:

--BRIEF DESCRIPTION OF THE DRAWING--

--The figure illustrates the two-piece golf ball showing a cross section thereof having a cover (1) and a core (2).--
